

Ivan Bazan

Backend Go Developer

+375 (29) 853-70-60 | [telegram](#) | ivanonlane@gmail.com | github.com/hronovv

Backend developer focused on Go. Interested in building reliable REST APIs and backend systems. Open to **internship** or **junior** backend role; considering **remote** work or **on-site**.

EDUCATION

Belarusian State University of Informatics and Radioelectronics

Minsk, Belarus

B.Sc in Computer Science and programming technologies

Sept. 2024 – July 2028

School №25

Brest, Belarus

3.9 GPA. Math, Informatics, English and Physics

Sept. 2013 – June 2024

COURSES

DSA, Discrete Math, Computer Architecture, Assembly (Intel 8086, Motorola MC68HC11)

EXPERIENCE

Undergraduate Teaching Assistant – Assembly Programming

Sep. 2025 – Feb. 2026

Belarusian State University of Informatics and Radioelectronics

Minsk, Belarus

- Assisted the course instructor in creating new lecture and presentation materials on Intel 8086 and Motorola MC68HC11 assembly programming.
- Revised and improved existing teaching materials to make them clearer, more structured, and easier for students to follow.
- Updated and redesigned laboratory assignments for the “Software Construction” course to align them with the renewed curriculum and learning outcomes.

PROJECTS

Financial System | *Go, PostgreSQL, REST API, JWT, Swagger UI, Docker Compose*

March 2025 – Present

- Designed and implemented a RESTful backend with a **layered architecture**: transport (REST handlers), service layer, repository layer, and domain models.
- Integrated PostgreSQL as the primary data store with transaction-safe operations and structured SQL queries.
- Implemented authentication and authorization with JWT, supporting role-based access for admins and clients.
- Documented and tested all public endpoints using Swagger UI/OpenAPI to simplify integration for frontend and third-party services.
- Containerized the application and database with Docker and Docker Compose for reproducible local development and deployment.

Keyboard AI Trainer | *C++, Qt, SQLite, JSON*

April 2025 – July 2025

- Built an intelligent typing trainer with **personalized text generation** for each user, real-time feedback, and adaptive logic in C++.
- Developed a Qt-based desktop UI for visualizing the keyboard layout, typing process, and user progress statistics.
- Used SQLite to persist user profiles, session results, and long-term performance history.
- Employed JSON-based data exchange between the core training logic and the UI layer for flexible configuration and analytics.

TECHNICAL SKILLS

Languages: Go, C/C++, Python, C#, JavaScript, SQL (PostgreSQL), HTML, CSS

Frameworks & libraries: Gorilla Mux, React

Backend & API: REST, OpenAPI/Swagger, JWT

Databases: PostgreSQL, SQLite

Dev & DevOps: Git, GitHub, Docker, Docker Compose, CMake, Makefile

IDEs & tools: GoLand, VS Code, CLion, Rider, PyCharm

LANGUAGES

Russian — Native | English — B2 | Belarusian — Native
